# Installation Guide

## 1. [Web] System Requirements

To successfully deploy the application, ensure the target environment meets the following system requirements:

### Server Requirements (For Backend and APIs, if applicable)

- **Processor:** Minimum 2 GHz CPU (Quad-Core recommended for handling multiple requests)
- **RAM:** At least 4 GB (8 GB or more recommended for high-traffic environments)
- **Storage:** Minimum 10 GB of available space
- **Operating System:**
  - Windows Server 10/11
- **Database:**
  - PostgreSQL 12 or later
- **Network:**
  - **Bandwidth:** Adequate bandwidth depending on the expected traffic
  - **Ports:** Ensure open ports for HTTP (80) and HTTPS (443) traffic
- **Security:**
  - SSL certificates for secure HTTPS connections
  - Firewall configured to protect incoming and outgoing traffic
  - Database access restrictions (e.g., only allow access from trusted IPs)

### Software Requirements

- **Containerization:** Docker
- **Flutter SDK:** Version 3.0 or later
- **Android SDK:** Required for building Android APKs

#### 1. Clone the Repository:

```
bash
```

Copy code

```
git clone https://github.com/IFMTYP2024/team04-main.git
```

```
cd workshop-management-software
```

## 2. Set Up the Environment:

- Install Docker

Copy this code on the project directory:

- `-/>docker compose up`

now open docker and run the containers.

- The app container for backed and the database
- The frontend container for the webapp

## 5. Default Credentials

Provide the login credentials for testing or admin roles:

- **Manager:** jd@eemail.com / jh
- **Mechanic:** jr@autoworx.com / jr

## 2.[mobile app] System Requirements

### For Android Devices:

- **OS Version:** Android 8.0 (Oreo) or later
- **RAM:** Minimum 2 GB
- **Storage:** At least 500 MB of free space
- **Processor:** ARM64 architecture
- **Internet:** Active internet connection for data syncing and updates

Run the : app-release.apk file

Create account and login.
